

Updated information

As communicated in our Investor News on June 30, 2022, the values of the GHG Intensity indicator in the Upstream segment for the period 2018-2020 were modified, according to the Sustainability Report for 2021. Consequently, in OMV Petrom's Annual Report 2019 published on April 27, 2020, the annual variation of the GHG Intensity indicator in the Upstream segment, published on page 22, is +1.7% instead of -4.7%:

"In Upstream, we continued to focus on improving the carbon efficiency of our operations, achieving a 4.7% decrease of with the carbon intensity slightly increasing by 1.7% in 2019 vs. 2018."

This correction **does not have any impact on the company's reported financial statements**. No other corrections of other data and information in the Annual Report 2019 were made.
